

OUTPUT

Level 1: Very Basic

1. Display all students.

```
41 -- 1.Display all students
42 • SELECT * FROM students;
```

student_id	student_name	gender	city	join_year
1	Anu	F	Tumakuru	2024
2	Ravi	M	Bengaluru	2023
3	Kiran	M	Tumakuru	2024
4	Sneha	F	Mysuru	2023
5	Manu	M	Tumakuru	2022
NULL	NULL	NULL	NULL	NULL

2. Display only student_name and city from students table.

```
43 • SELECT student_name , city FROM students;
```

student_name	city
Anu	Tumakuru
Ravi	Bengaluru
Kiran	Tumakuru
Sneha	Mysuru
Manu	Tumakuru

3. Show all courses.

```
44 • SELECT * FROM courses;
```

course_id	course_name	department
101	SQL Basics	Computer Science
102	Excel for Analysts	Commerce
103	Statistics	Mathematics
NULL	NULL	NULL

4. Display students who are from Tumakuru.

45 • `SELECT * FROM students where city = 'Tumakuru';`

Result Grid

Filter Rows:

Edit: 

Export/Import: 

Wr

	student_id	student_name	gender	city	join_year
▶	1	Anu	F	Tumakuru	2024
	3	Kiran	M	Tumakuru	2024
	5	Manu	M	Tumakuru	2022
*	NULL	NULL	NULL	NULL	NULL

5. Display students who joined in 2024.

46 • `SELECT * FROM students where join_year = '2024';`

Result Grid

Filter Rows:

Edit:   

Export/Import:  

Wrap

	student_id	student_name	gender	city	join_year
▶	1	Anu	F	Tumakuru	2024
	3	Kiran	M	Tumakuru	2024
•	NULL	NULL	NULL	NULL	NULL

Level 2: Filtering

6. Show students whose gender is F.

47 • `SELECT * FROM students where gender = 'F';`

Result Grid

Filter Rows:

Edit:

Exp

	student_id	student_name	gender	city	join_year
▶	1	Anu	F	Tumakuru	2024
	4	Sneha	F	Mysuru	2023
*	NULL	NULL	NULL	NULL	NULL

7. Show marks greater than 80.

```
48 • SELECT * FROM marks where marks > '80';
```

Result Grid			Filter Rows:	Edit:   
	mark_id	student_id	course_id	marks
▶	1	1	101	85
	3	3	101	90
	4	4	102	88
	7	2	102	81
*	NULL	NULL	NULL	NULL

8. Display course names from Commerce department.

```
49 • SELECT * FROM courses where department = 'Commerce';
```

course_id	course_name	department
102	Excel for Analysts	Commerce
NULL	NULL	NULL

9. Show students who are not from Bengaluru.

```
50 • SELECT * FROM students where city != 'Bengaluru';
```

student_id	student_name	gender	city	join_year
1	Anu	F	Tumakuru	2024
3	Kiran	M	Tumakuru	2024
4	Sneha	F	Mysuru	2023
5	Manu	M	Tumakuru	2022
NULL	NULL	NULL	NULL	NULL

10. Display marks between 70 and 90.

```
51 • SELECT * FROM marks where marks BETWEEN 70 AND 90;
```

mark_id	student_id	course_id	marks
1	1	101	85
2	2	101	72
3	3	101	90
4	4	102	88
6	1	103	79
7	2	102	81
NULL	NULL	NULL	NULL

Level 3: Sorting

11. Display all students ordered by student_name ascending.

```
52 • SELECT * FROM students ORDER BY student_name ASC;
```

student_id	student_name	gender	city	join_year
1	Anu	F	Tumakuru	2024
3	Kiran	M	Tumakuru	2024
5	Manu	M	Tumakuru	2022
2	Ravi	M	Bengaluru	2023
4	Sneha	F	Mysuru	2023
NULL	NULL	NULL	NULL	NULL

12. Show marks ordered from highest to lowest.

53 • `SELECT * FROM marks ORDER BY MARKS DESC;`

	mark_id	student_id	course_id	marks
▶	3	3	101	90
	4	4	102	88
	1	1	101	85
	7	2	102	81
	6	1	103	79
	2	2	101	72
	5	5	103	67
*	NULL	NULL	NULL	NULL

13. Display students ordered by join_year descending.

54 • `SELECT * FROM students ORDER BY join_year DESC;`

	student_id	student_name	gender	city	join_year
▶	1	Anu	F	Tumakuru	2024
	3	Kiran	M	Tumakuru	2024
	2	Ravi	M	Bengaluru	2023
	4	Sneha	F	Mysuru	2023
	5	Manu	M	Tumakuru	2022
*	NULL	NULL	NULL	NULL	NULL

Level 4: Aggregate Basics

14. Find total number of students.

55 • `SELECT COUNT(*) AS total_students FROM students;`

	total_students
▶	5

15. Find average marks.

56 • `SELECT AVG(marks) AS avg_marks FROM marks;`

	avg_marks
▶	80.2857

16. Find highest marks.

```
57 • SELECT MAX(marks) AS max_marks FROM marks;
```

Result Grid		Filter Rows:	Export:	Wrap Cell Cont
	max_marks			
▶	90			

17. Find lowest marks.

```
58 • SELECT MIN(marks) AS min_marks FROM marks;
```

Result Grid		Filter Rows:	Export:	Wrap Cell C
	min_marks			
▶	67			

18. Find total marks scored by all students.

```
59 • SELECT SUM(marks) AS total_marks FROM marks;
```

Result Grid		Filter Rows:	Export:	Wrap Ce
	total_marks			
▶	562
